

It's not waste. It's energy.

Condensate trap

Highest possible protection by secured locking system.

Electrical condensate trap

The manual or electrical condensate trap from AAT can be used to drain all condensate from the gas system without gas outlet.

The ATEX approved electric motor of the electrical condensate trap is connected with both ball valves in a way that only one of both ball valves can be open while the other is closed 100%.

The connection design is protected by a cover plate.

With the manual condensate trap two ball valves are locked against each other in such a way that only one can be opened manually when the other is completely closed.

In the basic setting the connection between the gas system and the condensate collector tank is open and the condensate is collected in the tank.

When emptying the system, the condensate is drained and the connection to the gas system is closed.

Thus with both models a direct removal of gas into the environment is impossible and an absolute security is granted.

Advantages:

- ✓ Material: Stainless steel 1.440x (SS316)
- ✓ Lock is maintenance-free.
- ✓ Escaping of gas is impossible.
- ✓ ATEX-approved motor
- ✓ fully automatic
- ✓ Level indication

Manual condensate trap
